

NEWSLETTER DECEMBER 2024

Just before the Holidays, it's time to look back and ahead. In this newsletter, we aim to do both. The year 2024 was full of exciting projects, which we have summarized in **our thematic annual review**.

The recently completed urban climate analysis for our region clearly highlights the importance of the Minett Biosphere's role in the **Interreg project** *Cool Neighbourhoods*. The pilot project, to be realized

through this European funding program, aligns perfectly with the conclusions of the scientific climate study presented in the fall. Learn more about how this project can help mitigate the effects of climate change in urban areas in this newsletter.

Other topics include the **first events of the Minett Natur an Emwelt Léier Lab (MiNELL) for 2025** and our podcast.

Discover more about our scientific workshops exploring nature and the unique biodiversity of our region, which you can now sign up for. Take some time during the quieter days at the end of the year to (re) discover the industrial heritage of the Greater Region and meet fascinating individuals dedicated to

preserving this legacy by listening to our travelling podcast: *Minett Mash-Up*.

We wish you a Merry Christmas and a Happy New Year 2025.

A LOOK BACK AT 2024

Zero Carbon,» our Nature and Environment Learning Lab with its workshops and pilot projects, and

the promotion of our region. In our 2024 annual review, we've compiled a few highlights from the

study shows that the pilot project the Minett Biosphere will implement through the Interreg program Cool Neighbourhoods in the center of Differdange is not only being developed in the right location but also aligns with the measures suggested in the urban climate study. These measures aim to adapt urban

spaces to the impacts of climate change.
